1. Prerequisites

1.1 Environment Requirements

- Microsoft dotNet Framework 2.0;
- NDDigital n-Host installed on the machine;
- SNMP protocol released to network communications.

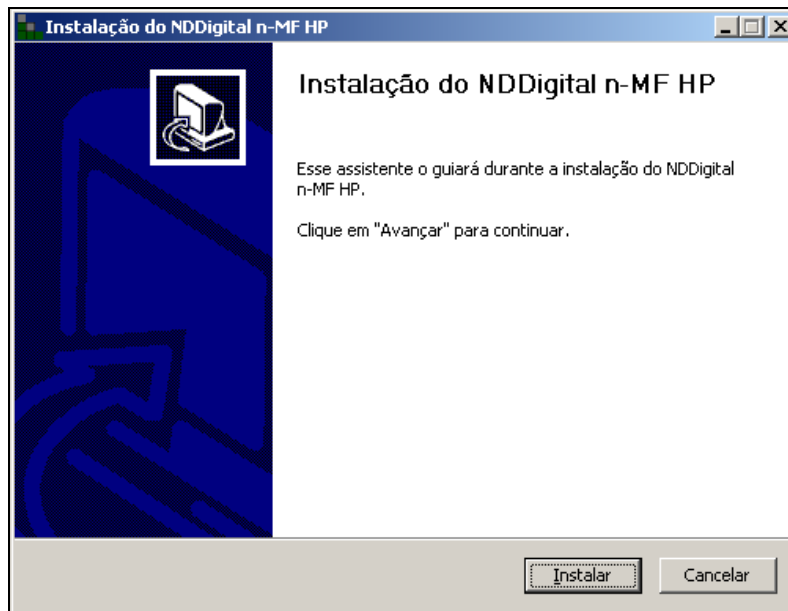

1.2 Approved Operational Systems

- Windows 2003 Server SP2;
- Windows 2000 Server SP4;
- Windows XP SP3.

2. Installation

2.1 Apresentação

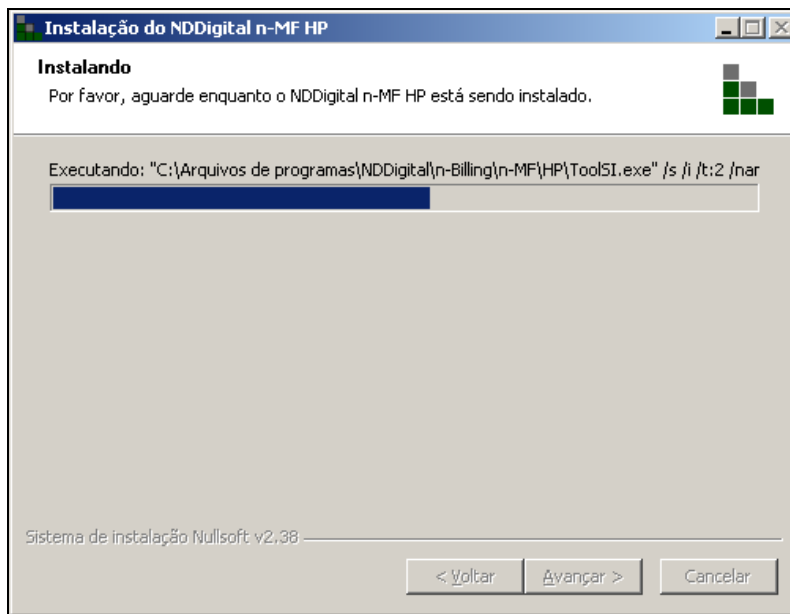

The installation wizard will start to facilitate installation of NDDigital n-MF HP. It is recommended that during installation to close all applications in use. After reading the instructions click **Next**.

2.2 Copy of Files

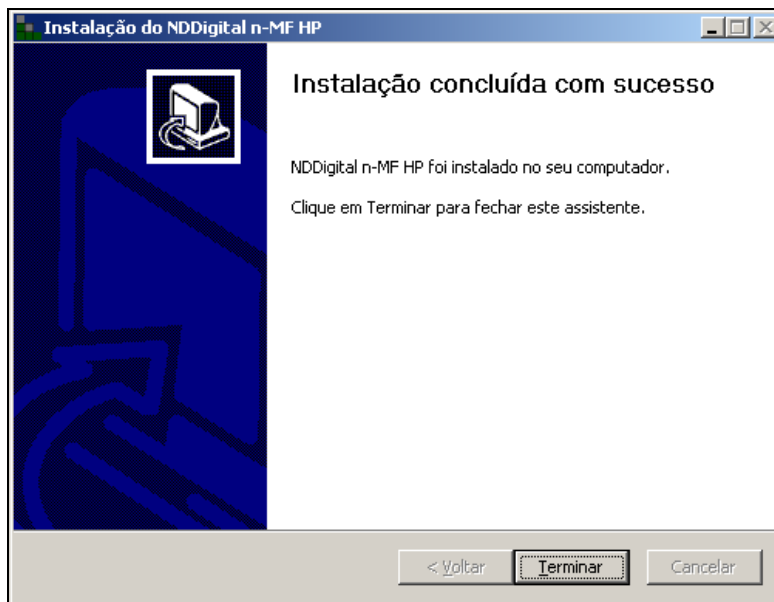

Please wait the installer to perform the copy of the necessary files for the system to work.

P.S.: Installation directory definition was not requested because it's a level above the n-Host. As the default directory of n-Host is: "**Program Files\NDDigital\n-Billing\n-Host**", n-MF HP directory will be: "**Program Files\NDDigital\n-Billing\n-MF\HP**".

2.3 Completing Installation

To complete the NDDigital n-MF HP installation click **Finish**.

2.4 Settings

For more information concerning the system settings, approved printers and others, see the NDDigital n-MF HP administration manual.
